

Are your documents secure?

Core Secure Documents ensures you are in compliance with CJIS security requirements for storing, accessing, viewing, and transmitting documents that contain CJIS data. You may turn any document, Talon query result, TIMS Incident, system report, or any other document into a Core Secure Document. The application utilizes the TalonPoint infrastructure to turn information into secure PDF documents that can be stored for retrieval by, or transmittal to, authorized parties, including individuals from your agency, another agency, prosecutor's office, etc. Audit trails automatically track the document submission and access information. Document retention periods can be set to meet your individual agency needs.

Security

The Core Secure Document application is compliant with FBI and State CJIS security policy requirements and uses two-factor authentication for end-to-end security and encryption of information.

The screenshot displays a document management interface. At the top, a table lists documents with columns for 'F... When', 'Description', and 'Source'. A context menu is open over one of the entries, with 'Save as Secure Document' highlighted in red. Below the table, a detailed view for a document titled '06/22/15 | 09:44:19.45 | Grand Blanc PD Test | DRIVER, ANNE, CARR,' is shown. It includes fields for 'Queried: DRIVER, ANNE CARR', 'Response: DRIVER, ANNE CARR', and a 'Statistics Summary' section with personal details like DOB, Race, Sex, Skin Tone, Height, Weight, Eyes, and Hair. At the bottom, a 'Secure Documents: Add Secure Document' dialog box is open, showing fields for 'TP. ORI' (MI2543100), 'Operator's Name' (55: NANCYGBDISP), 'File Name' (securedocument20150908_1339.htmToPDF), 'Title' (DRIVER, ANNE, CARR), 'Requested By' (NANCYGBDISP), and 'Incident Number' (15 001245). A 'Transmit' button is highlighted in yellow.

Features

- Documents may be saved as secure per CJIS requirements.
- Control who views a document.
- Audit trail tracks submission and access of documents.
- Search tools help locate a document.
- No additional passwords to remember, as it is incorporated into Talon.
