

Portable Configuration and Communications Server.

MultiBridge Enterprise Edition provides a flexible to IBM® i5-iSeries™-AS400® and zSeries™-OS/390® systems, and a variety of Unisys® hosts and UNIX servers. Offering multiple connectivity option, including Internet and intranet access to a single host or multiple hosts from a mix of client platforms, MultiBridge can be installed on a Windows® server, natively on the i5-iSeries-AS400, on a Linux server, on a UNIX machine or on any server that supports Java™. It's flexibility and modular architecture make MutliBridge the server of choice for all of Core Technology's solutions, including the CTCBridge® line of emulation as well as Visual Underneath®

Powerful Redirector Capabilities.

The MultiBridge Redirector component routes datacomm traffic from client to host, functioning as an SSL server while it redirects IP addresses and ports behind a firewall so the host is not directly accessible from the Internet.

Station Groups.

Organize your host connections into station groups to simplify host resource management.

Administrator Console.

MultiBridge's administrator program provides an intuitive management tool for use in configuring, modifying, managing, adding or removing host or client user stations. Large sites with heavy communications traffic, find this an especially beneficial information tool, allowing them to monitor client/host connection statistics and easily provide load balancing. With the administrator console, remote administration is easy.

System Requirements.

Network

- TCP/IP Connectivity to your host system
- A connection to the Internet (with an Internet Service Provider) or intranet for client connections
- Appropriate TCP/IP port(s) opened if a proxy or firewall are opened

Host

- An IBM iSeries-AS/400, IBM mainframe or IBM compatible mainframe, Unisys A, V Series, ClearPath NX, IX, 2200, 1100, Galileo Apollo or UNIX Host.

Server

- Access to host system via TCP/IP
- Windows Operating System, JVM installed the LINXUS server, or OS/400 Operating System with i5-iSeries-AS/400 Developer Kit for Java
