

## Simplify Your Evidence Handling

Core's Advanced Evidence Module uses a handheld device to scan and move evidence and/or property. Advanced Evidence processing saves your evidence officers time and improves accuracy by taking away the manual task of bringing items to a computer and typing the data into the evidence program. This eliminates human error and ensures that property items are where they're supposed to be located.

The TIMS Evidence Scan & Audit solution uses an Android device and a Bluetooth capable barcode scanner to move items in your evidence room. This could be to move property to the crime lab, court or to a new location, or for evidence audits that may happen multiple times a year in your agency.

## Highlights

- \* Rapid-fire scanning of barcodes
- \* Electronic evidence audit
- \* Print property bar code labels with customized sizes
- \* Print bar codes for rooms and locations for easy entry of data
- \* Reports of all changes
- \* Uses inexpensive Bluetooth scanner
- \* Uses Android device that does not require a service plan
