

Built on the Power of Talon

Talon Desktop is a client application in Core Technology's Talon suite product line. This NCIC compliant program is a tool used by thousands of law enforcement personnel to search for real-time information.

Share Information.

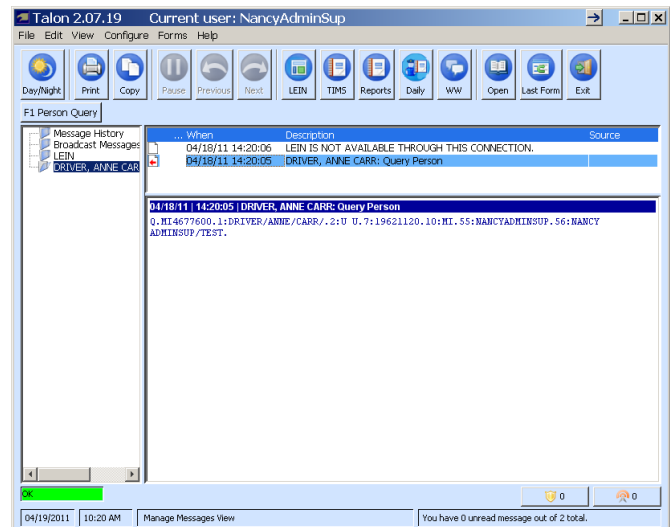

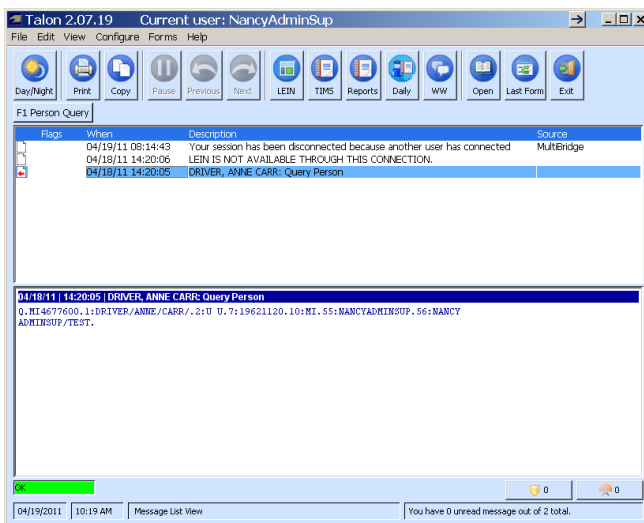

Standard queries return well-organized, easy to read information and images from state, regional and local databases, including Michigan driver's license images. Only authorized personnel are permitted to access sensitive data, and extensive auditing capabilities ensure proper system usage. A built in messaging program offers secure, instant communication between personnel.

Configure to your needs.

Users can define and view highlighted cautions and warnings to identify critical information, and create shortcuts for frequently used searches. Multiple message views and a configurable program appearance allow each user to tailor the information to their particular responsibilities.

Proven, Reliable Software Provider.

Founded in 1981, Core Technology has been a strong, stable Michigan company for 30 years. Nearly every law enforcement agency in the state is already a valued customer.

Talon offers four ways to view data:

- **Activity View:** Displays all messages in a single, scrolling window
- **Message List View:** An email-like presentation of queries, responses & broadcast messages
- **Manage Message View:** Messages are organized and displayed in folders
- **Case View:** Organize information according to category; designed for investigative work
